These primary/secondary filters with antimicrobial additive deliver three-stages of filtration. The first stage (white side) of the media is designed for depth-loading, capturing particulate as air enters. The second stage (orange side) is designed to stop dirt from passing through the media. Finally, the composite adhesive delivers the third stage of performance. The aggressive adhesive has the ability to absorb particles and continuously renew its effectiveness.

### **Antimicrobial Keeps Filter Media Free From Mold, Mildew, Algae & Fungi**

The antimicrobial layer is part of the manufacturing process, not a costly, post-application. The elimination of microbial growth reduces resistance and extends service life.

### **Primary/Secondary Three-Stage Filter Benefits**

- Fewer change-outs reduce filter expense, labor cost, disposal fees and landfill waste.
- Performance continually increases right up to the point of change-out.
  - Dual-Ply Media
  - MERV 9 Efficiency
  - Pre-Cut Pads
